Supplementary Questionnaire

Above Ground Storage Tanks

1. Name of Applicant: _____
2. Facility Number and Address: _____
3. Are all the tanks and associated piping in compliance with applicable federal, provincial and local requirements? YES NO
4. Is the material stored in each tank compatible with the tank construction material and the secondary containment? YES NO
5. Does each tank have an impermeable secondary containment system that can hold either 110% of the largest tanks volume or 10% of the total tank volume (if more than one tank exists in the secondary containment area), whichever is greater? YES NO
6. Is every tank situated on a concrete or impermeable slab? YES NO
7. Are the fill, outlet and vent pipes located within the secondary containment area(s)? YES NO
8. What is the tank inspection and integrity testing schedule?

9. When was the tank wall thickness last tested? _____
10. Does the facility maintain an inventory of tank contents? YES NO
11. Is the facility located in a 100 year flood plain? YES NO
If yes, does the secondary containment wall of each tank extend above the anticipated flood levels?
YES NO
12. Does the tank system include a dispensing station? YES NO
If yes, is the dispensing station situated on an impervious surface with a spill collection system?
YES NO
13. Describe the security/monitoring at the premises (occupied 24 hours/day; fenced; electronic leak detection system with central station alarm; past vandalism or other threats, etc.):
